# TEST PLAN: PHPTRAVELS LIVE DEMO

Travel Booking Platform, Demo Access Page and Demo Environment

Application under test: https://phptravels.com/demo (and the demo portals it opens: https://phptravels.net)

| Document control | Detail |
|---|---|
| Document ID | TP-PT-001 |
| Version | 1.0 |
| Date | 30 October 2026 |
| Status | Draft for review |
| Prepared by | Bug Slayers Team |
| Owner | Khaled Taha (Team Leader) |
| Test team | Taha Ayman, Menna Mostafa, Hagar Sayed, Rana Samy, Nada Salah |

## 1. Introduction

### 1.1 Purpose

This plan defines how the team will test the PHPTRAVELS live demo: the access page at phptravels.com/demo and the four demo portals it unlocks. It states what is tested, how, by whom and when, so that the work is shared fairly and every member knows exactly what they own.

### 1.2 Product Overview

PHPTRAVELS is a travel booking platform for agencies, tour operators and online travel agencies. The demo page lets a visitor request free access (no credit card). After the form is submitted, the page shows ready logins and also emails a copy. The demo runs on live supplier data in test mode and payments use a sandbox card, so nothing is charged. The demo is shared by all visitors and is reset regularly, so bookings and settings can disappear.

### 1.3 Demo Roles and Access

| Role | What it represents | Main areas to check |
|---|---|---|
| Customer | A traveller using the storefront | Search, book, pay, manage trips |
| Agent | A B2B sub-agent | Net rates, wallet credit, bookings for clients |
| Supplier | A hotel or operator | Inventory, rates, bookings received |
| Admin | The agency back office | Bookings, markups, suppliers, payments, reports |

### 1.4 Elements of the Demo Page Under Test

- Request-access form: first name, last name, business name, country, WhatsApp number, work email, security check (simple sum), privacy link and a Website field.
- Credentials panel with four tabs (Admin, Customer, Agent, Supplier), each showing URL, email and password with Copy buttons and an Open button.
- Content sections: what you can test, screens, buyer's guide, comparison table, four-step guide, trust badges and FAQ.
- Header menus, language selector (24 languages), footer and calls to action (Live demo, Pricing, Book a guided demo, Talk to sales).
- Storefront modules on phptravels.net: flights, stays (hotels), tours, cars and transfers, checkout and customer account.

## 2. Test Objectives (SMART)

| ID | Objective | Measure | Target |
|---|---|---|---|
| OBJ-1 | The access request works end to end | Form scenarios TS-01 to TS-05 executed | 100% executed by 8 Nov |
| OBJ-2 | Issued credentials are correct and usable | Role scenarios TS-06 to TS-10 executed | All four roles sign in successfully or defects logged |
| OBJ-3 | Page content, navigation and links are reliable | Scenarios TS-11 to TS-14 executed | No broken primary links left open |

| ID | Objective | Measure | Target |
|---|---|---|---|
| OBJ-4 | Storefront search works in every module | Scenarios TS-15 to TS-18 executed | All modules covered |
| OBJ-5 | A full booking is correct across customer, admin, agent and supplier views | Scenarios TS-19 to TS-26 executed | Prices and statuses match across views |
| OBJ-6 | Basic non-functional quality is checked | Responsive, UI, usability, accessibility, compatibility, security and performance observation | Done on every member's own pages by 10 Nov |
| OBJ-7 | Reporting is delivered on time | Execution report and summary report | Summary report on 12 Nov 2026 |

# 3. Scope

## 3.1 In Scope

- The demo page and its request-access form, credentials panel, content, navigation, language selector and footer.
- Signing in as Customer, Agent, Supplier and Admin with the issued credentials.
- Storefront search for flights, stays, tours and cars/transfers; checkout with the sandbox card; the customer account.
- View-only checks of the Admin, Agent and Supplier portals to confirm that a booking made in the storefront appears correctly.
- Basic non-functional checks: responsive layout, visual quality, usability, accessibility, browser compatibility, safe client-side security checks and performance observation.

## 3.2 Out of Scope

- Penetration testing, load or stress testing, and any attack on the shared environment.
- Changing global settings in the admin (markups, suppliers, payment gateways); these are view-only.
- Real customer data and real payment cards.
- Source code, installation, server requirements and the licensed product outside the demo.

- Mobile apps (iOS and Android), pricing and purchase flow, and the rest of the phptravels.com marketing site beyond the demo page.
- Third-party content such as social networks, review sites and chat widgets (checked only for link behavior).

# 4. Test Approach and Strategy

## 4.1 Methodology

Risk-based testing in short cycles. Each member designs test cases for their own module, a peer reviews them, then they are executed manually. Exploratory sessions follow, then the core flows are automated with Selenium. The demo page's own descriptions (for example the FAQ and the four-step guide) and common travel-booking practice are the baseline for expected behavior, because no separate requirements document exists.

## 4.2 Test Levels and Types

| Type | Technique | Focus | Who |
|---|---|---|---|
| Smoke | Quick check of main flows | Page loads, form shows, demo portals open | All members, each morning |
| Functional | Test cases per module | Section 5 | Module owners |
| End-to-end | Full journey | Request access, book, verify in all portals | Khaled Taha |
| Data / calculation | Cross-page comparison | Price, taxes and total in search, checkout, account and admin | Rana Samy leads; all compare on their pages |
| Input handling | Invalid and unusual input | Empty, long, special characters, wrong format | Nada Salah leads; all on their pages |
| UI / Visual and responsive | Visual inspection at several screen sizes | Layout, images, alignment, mobile view | Taha Ayman leads; all on their pages |

| Type | Technique | Focus | Who |
|---|---|---|---|
| Usability and accessibility | Heuristics, keyboard use, labels, contrast | Forms, buttons, focus order, alt text | Menna Mostafa leads; all on their pages |
| Compatibility | Different browsers and viewports | Chrome, Firefox, Edge, Safari if available, one phone | Hagar Sayed leads; all run the core flow on a different browser |
| Security (basic) | Safe client-side checks | HTTPS, password masking, input handling, session and logout; no attacks | Khaled Taha leads; all on their pages |
| Performance (observation) | Manual timing | Page load and search response, noted not stressed | Khaled Taha leads |
| Exploratory | Charters, 45 to 60 minutes | Unscripted exploration per module | All members |
| Regression and automation | Selenium WebDriver, Page Object Model | Smoke and core regression | Each member for their module; Khaled Taha for the framework base and end-to-end |

## 4.3 Tools

Selenium WebDriver with the Page Object Model; browser developer tools; Excel for test cases and execution results; a shared bug tracker or sheet; Git for scripts; a dedicated test mailbox; chat for daily updates.

## 4.4 Entry, Exit and Suspension Criteria

**Entry:** the demo page and portals are reachable; each member has the plan and their module; a test mailbox and made-up test data are ready; the team knows the defect template.

**Exit:** all P1 scenarios executed; at least 95% of all scenarios executed; no open Critical or High defect unless accepted by the Team Leader; every defect logged with evidence; Test Summary Report delivered.

**Suspension:** the demo site is down, the form cannot be submitted at all, or the demo is reset in the middle of a test cycle.

**Resumption:** the site is back and the smoke test passes; affected tests are repeated.

## 5. Work Distribution

The demo is split into six modules of similar size. Each member owns one module, and nobody carries a large share. The Team Leader's module is smaller in test count because he also coordinates the team.

| Member | Module owned | Scenarios | Count | Non-functional lead |
|---|---|---|---|---|
| Nada Salah | A. Request-access form | TS-01 to TS-05 | 5 | Input handling and error messages |
| Menna Mostafa | B. Credentials panel and role sign-in | TS-06 to TS-10 | 5 | Usability and accessibility |
| Taha Ayman | C. Page content, navigation and language | TS-11 to TS-14 | 4 | Responsive and UI / visual |
| Hagar Sayed | D. Storefront search (flights, stays, tours, cars) | TS-15 to TS-18 | 4 | Browser and viewport compatibility |
| Rana Samy | E. Booking, checkout and customer account | TS-19 to TS-22 | 4 | Data and calculation consistency |
| Khaled Taha | F. Back-office portals (view-only) and end-to-end | TS-23 to TS-26 | 4 | Security and performance observation |

**Shared by all six members (including the Team Leader):** a general smoke test of the whole demo; peer review of test cases; logging every defect with the standard template; re-verifying assigned defects; exploratory sessions; the daily update; non-functional checks on the pages of their own module; and Selenium scripts for their own module. The lead in each area consolidates the findings of the whole team.

**Peer-review rotation:** Taha Ayman reviews Menna Mostafa, Menna Mostafa reviews Hagar Sayed, Hagar Sayed reviews Rana Samy, Rana Samy reviews Nada Salah, Nada Salah reviews Taha Ayman, and Khaled Taha reviews the final set of all deliverables. In the module swap, each member re-tests the module of the person they reviewed.

# 6. Test Scenarios

Priority: P1 = must run first, P2 = important, P3 = if time allows.

## Module A: Request-access form (Nada Salah)

| ID | Scenario | Priority |
|---|---|---|
| TS-01 | Form shows every field, labels, the security check and the privacy link | P1 |
| TS-02 | Validation: empty fields, invalid email, non-digit or country-code WhatsApp number, very long text, special characters | P1 |
| TS-03 | Country selector: search, no-match message, selecting and changing the country | P2 |
| TS-04 | Security check: correct answer, wrong answer, empty, and a new question after a failed try | P1 |
| TS-05 | Valid request: credentials appear at once, welcome message uses the entered name, and a copy arrives by email | P1 |

## Module B: Credentials panel and role sign-in (Menna Mostafa)

| ID | Scenario | Priority |
|---|---|---|
| TS-06 | Four tabs (Admin, Customer, Agent, Supplier) switch correctly and each shows URL, email and password | P1 |
| TS-07 | Copy buttons copy the right value and show the Copied message | P2 |
| TS-08 | Open buttons open the correct portal in a new tab | P1 |
| TS-09 | Sign in as each role with the issued credentials and reach the right dashboard | P1 |
| TS-10 | Wrong password, empty fields, logout and back-button behavior after logout | P2 |

## Module C: Page content, navigation and language (Taha Ayman)

| ID | Scenario | Priority |
|---|---|---|
| TS-11 | Header menus, logo, footer and quick links open the right pages with no broken links | P1 |
| TS-12 | Content sections (what you can test, four steps, comparison table) display correctly and their buttons work: Book a guided demo, Talk to sales, Pricing | P2 |
| TS-13 | FAQ items open and close, and the answers match actual demo behavior (free, shared data, reset) | P2 |
| TS-14 | Language selector: switching language keeps the page, form and layout working (sample of languages including a right-to-left one) | P2 |

## Module D: Storefront search (Hagar Sayed)

| ID | Scenario | Priority |
|---|---|---|
| TS-15 | Flights: one-way and round trip, dates, passengers, results, sorting, fare details | P1 |
| TS-16 | Stays: destination, dates, guests, filters (stars, cancellation, board), price per night | P1 |
| TS-17 | Tours: search, details page, add-ons and the updated total | P2 |
| TS-18 | Cars and transfers: pick-up and drop-off, dates, transmission and seats, insurance option | P2 |

## Module E: Booking, checkout and customer account (Rana Samy)

| ID | Scenario | Priority |
|---|---|---|
| TS-19 | Selected item flows into the order summary with the same price, taxes and total | P1 |
| TS-20 | Payment with the sandbox test card: booking is confirmed and a reference is shown | P1 |
| TS-21 | Checkout validation: empty traveller details, invalid card, expired card | P2 |
| TS-22 | Customer account shows the new booking with correct details and status | P1 |

## Module F: Back-office portals and end-to-end (Khaled Taha)

| ID | Scenario | Priority |
|---|---|---|
| TS-23 | Admin (view-only): the new booking appears with the right customer, amount and status | P1 |
| TS-24 | Agent portal: wallet, net rates and bookings display consistently | P2 |

| ID | Scenario | Priority |
|---|---|---|
| TS-25 | Supplier portal: inventory, rates and received bookings display | P2 |
| TS-26 | End to end: request access, sign in, search, book with the sandbox card, then verify the same booking in customer, admin and supplier views | P1 |

## Sample Detailed Test Cases

| ID | Test case | Steps | Expected result |
|---|---|---|---|
| TC-02-01 | Invalid email rejected | Open the form, fill all fields with made-up data, enter an email without @, submit | The form is not submitted and a clear message points to the email field |
| TC-04-01 | Wrong security answer | Fill the form correctly, enter a wrong sum, submit | No credentials are shown; an error is displayed and the entered data is kept |
| TC-07-01 | Copy password | Open the Customer tab, press Copy next to the password, paste into a text box | The pasted value equals the displayed password and Copied appears |
| TC-20-01 | Sandbox payment | Select a flight, enter traveller details, pay with the sandbox card | Booking is confirmed, nothing is charged, and a reference number is shown |

## Exploratory Charters

- Explore the request-access form with unusual input and quick repeated actions to find validation gaps (Nada Salah).
- Explore moving between the four role tabs and portals to find session or display problems (Menna Mostafa).
- Explore the page at different widths and in several languages to find layout and text problems (Taha Ayman).
- Explore filters and sorting in each storefront module to find wrong or missing results (Hagar Sayed).

- Explore checkout with odd traveller data and going back and forward to find price or state errors (Rana Samy).
- Explore a booking from creation to every portal to find mismatches between views (Khaled Taha).

## 7. Traceability Matrix

| Objective | Area | Scenarios | Owner |
|---|---|---|---|
| OBJ-1 | Request-access form | TS-01 to TS-05 | Nada Salah |
| OBJ-2 | Credentials and sign-in | TS-06 to TS-10 | Menna Mostafa |
| OBJ-3 | Content, navigation, language | TS-11 to TS-14 | Taha Ayman |
| OBJ-4 | Storefront search | TS-15 to TS-18 | Hagar Sayed |
| OBJ-5 | Booking and cross-portal checks | TS-19 to TS-26 | Rana Samy, Khaled Taha |
| OBJ-6 | Non-functional | All modules | All members; leads per Section 5 |
| OBJ-7 | Reporting | Reports | Khaled Taha |

## 8. Test Deliverables

| Deliverable | Format | Owner | Due |
|---|---|---|---|
| Test Plan | Doc / PDF | Khaled Taha | 30 Oct 2026 |
| Test scenarios and test cases | Excel | Each member for their module | 2 Nov 2026 |
| Test data sheet | Excel | Taha Ayman | 1 Nov 2026 |
| Daily status update | Chat message | Khaled Taha | Daily |
| Defect reports | Tracker with evidence | All members | During execution |

| Deliverable | Format | Owner | Due |
|---|---|---|---|
| Selenium scripts | Git repository | Each member; Khaled Taha for the framework and end-to-end | 11 Nov 2026 |
| Test Execution Report | Excel | Khaled Taha | End of each cycle |
| Test Summary Report | Doc / PDF | Khaled Taha, reviewed by all | 12 Nov 2026 |

## 9. Defect Management

**Bug report standard:** title, module, steps to reproduce, expected and actual result, severity, priority, browser and device, date and time, and a screenshot or video. Every defect needs evidence.

| Severity | Meaning | Example |
|---|---|---|
| Critical | Main flow is blocked | Access form never returns credentials |
| High | Major feature wrong | Total differs between checkout and admin |
| Medium | Feature works with a workaround | Copy button copies the wrong tab |
| Low | Cosmetic or minor | Misaligned text on mobile |

**Life cycle:** New, Assigned, In review by the Team Leader, Confirmed or Rejected, Fixed, Re-tested, Closed or Reopened. Because the team cannot fix a vendor's site, defects are recorded, triaged and reported; the Team Leader decides in triage when expected behavior is unclear and records the decision.

**Metrics:** scenarios planned versus executed, pass and fail rate, defects by severity and module, defects found per member, and automation coverage.

## 10. Test Environment and Data

- Application: https://phptravels.com/demo and the demo portals at https://phptravels.net.
- Browsers: Chrome, Firefox and Edge on desktop; Safari if available; one phone or a mobile emulator.

- Data: made-up names and emails only; a dedicated test mailbox; the sandbox test card. No real customer data or real card, as the demo warns that data is shared and temporary.
- Credentials come from the demo page itself after the form is submitted, and a copy is emailed.
- Rules for a shared environment: edit only your own test records, never change global settings (markups, suppliers), finish each booking and its verification in one session, and take screenshots immediately because a reset can remove data.

## 11. Schedule

| Phase | Activity | Start | End | Owner |
|---|---|---|---|---|
| 0 | Test planning and review | 27 Oct | 30 Oct | Khaled Taha, reviewed by all |
| 1 | Kick-off, demo walkthrough, mailbox and tools setup | 1 Nov | 1 Nov | All members |
| 2 | Test case design and peer review | 1 Nov | 2 Nov | Each member for their module |
| 3 | Smoke testing (entry check) | 3 Nov | 3 Nov | All members |
| 4 | Functional testing per module | 3 Nov | 8 Nov | Module owners |
| 5 | Exploratory testing | 4 Nov | 8 Nov | All members |
| 6 | Non-functional and compatibility testing | 8 Nov | 10 Nov | All members; leads per Section 5 |
| 7 | Selenium: framework first, then scripts per module | 3 Nov | 11 Nov | Khaled Taha (framework, end-to-end); each member for their module |
| 8 | Module swap (cross-testing) | 9 Nov | 10 Nov | All members |

| Phase | Activity | Start | End | Owner |
|---|---|---|---|---|
| 9 | Defect re-verification and regression | 10 Nov | 11 Nov | All members |
| 10 | Closure: summary report and lessons learned | 12 Nov | 12 Nov | Khaled Taha, with all members |

**Milestones:** M1 (30 Oct) plan approved; M2 (2 Nov) test cases reviewed; M3 (3 Nov) smoke passed and execution begins; M4 (11 Nov) automation and regression complete; M5 (12 Nov) summary report delivered.

## 12. Roles and Responsibilities

| Member | Role | Responsibilities |
|---|---|---|
| Khaled Taha | Team Leader and QA Lead | Owns the plan, confirms scope, coordinates execution, reviews defects, tracks metrics, prepares the summary report; owns the end-to-end flow and the back-office checks; leads security and performance observation; builds the automation framework base |
| Taha Ayman | QA Engineer | Owns Module C; maintains the test data sheet; leads responsive and UI checks; automates his module |
| Menna Mostafa | QA Engineer | Owns Module B; leads usability and accessibility checks; automates her module |
| Hagar Sayed | QA Engineer | Owns Module D; leads compatibility checks; automates her module |
| Rana Samy | QA Engineer | Owns Module E; leads data and calculation consistency checks; automates her module |
| Nada Salah | QA Engineer | Owns Module A; leads input handling and error message checks; automates her module |

**Communication:** a short daily status message from the Team Leader; a quick stand-up each day; defects logged immediately; blockers raised at once in the team chat.

# 13. Risk Management

| ID | Risk | Likelihood | Impact | Mitigation | Owner |
|---|---|---|---|---|---|
| R1 | The public demo is down or slow | Medium | High | Run the smoke test each morning; keep buffer days; work on design and automation meanwhile | Khaled Taha |
| R2 | A demo reset removes bookings or settings mid-test | High | Medium | Finish each booking and its verification in one session; capture evidence at once | Khaled Taha |
| R3 | The security check or anti-spam rules block repeated or automated form submissions | Medium | Medium | Limit repeated submissions; reuse issued credentials; keep the form scenarios manual | Nada Salah |
| R4 | The credentials email is delayed or goes to spam | Medium | Low | Use a dedicated mailbox; treat the on-page credentials as primary | Menna Mostafa |
| R5 | Other visitors change shared data while we test | High | Medium | Check data before and after; compare with screenshots; repeat when needed | Rana Samy |
| R6 | Supplier data or availability changes between searches | Medium | Medium | Record search inputs and time; compare results within a short window | Hagar Sayed |
| R7 | A tester changes global admin settings | Medium | High | View-only rule; report and restore immediately if it happens | Khaled Taha |
| R8 | A team member is absent | Medium | Medium | Peer-review rotation and module swap; documented test cases | Khaled Taha |
| R9 | Expected behavior is unclear because there is no requirements document | High | Medium | Use the page's own descriptions and common practice; document every assumption and decide in triage | Taha Ayman |

# 14. Assumptions and Constraints

**Assumptions:** the demo stays available during the test window; credentials are issued after the form is submitted; the demo page's own descriptions define expected behavior; the sandbox card works for test payments; the Website field in the form is not meant to

be filled by users and is only observed, not abused.

**Constraints:** the demo is shared and reset regularly; the team has no access to source code, the database or server logs; testing is limited to the public interface; no penetration or load testing is allowed; the fixed deadline is 12 November 2026.

## 15. Change Management

Any change to scope, modules or dates is proposed to the Team Leader, recorded in the revision history, and communicated to all members. Module ownership changes only by agreement and with a hand-over of test cases and open defects.

## 16. Approval and Revision History

| Version | Date | Author | Change |
|---|---|---|---|
| 1.0 | 30 Oct 2026 | Khaled Taha | First version for the PHPTRAVELS live demo |

| Name | Role | Signature | Date |
|---|---|---|---|
| Khaled Taha | Team Leader and QA Lead | | |
| Taha Ayman | QA Engineer, Module C | | |
| Menna Mostafa | QA Engineer, Module B | | |
| Hagar Sayed | QA Engineer, Module D | | |
| Rana Samy | QA Engineer, Module E | | |
| Nada Salah | QA Engineer, Module A | | |
